

DCXF-AP

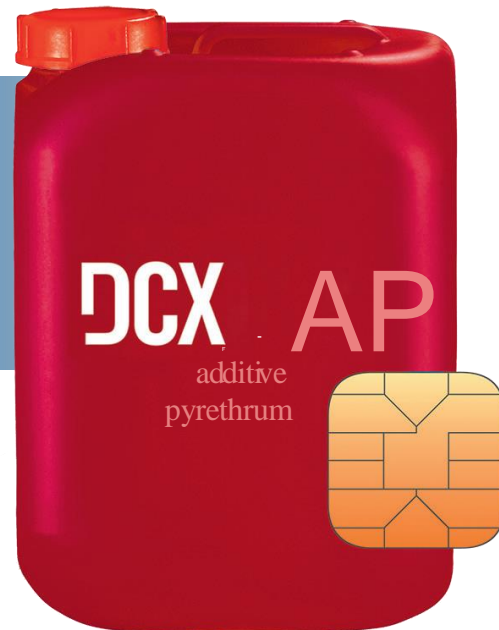

DCXF-AP is based on DCXF-Fluid and additionally contains natural substances to increase its efficacy against crawling and flying insects.

Rapid pest control guarantees optimal facility management

Bed bugs are a global pest problem and can be found almost everywhere and in high numbers, e.g. hotels and public transport. The innovative DCX approach saves a lot of troubles, time and money while inactivating bed bugs (*cimex lectularius*) and their eggs therefore increasing hygiene at the same time.

Bed bug (*cimex lectularius*)

Mode of action

The used substances complement each other and act synergistically as both increase the oxygen concentration which leads to oxidative stress within the cells of the insects. Additional compounds exhibit antimicrobial effects enhancing its disinfection efficacy.

RFID Safety

DCX canisters are tagged with a RFID chip at production that contains key information e.g. substance, manufacturer, date of production and expiration date. Therefore, errors in handling and use of hazardous or ineffective liquids are effectively prevented.
